

Time limit: 15 minutes.

Instructions: This tiebreaker contains 3 short answer questions. All answers must be expressed in simplest form unless specified otherwise. You will submit answers to the problem as you solve them, and may solve problems in any order. You will not be informed whether your answer is correct until the end of the tiebreaker. You may submit multiple times for any of the problems, but **only the last submission for a given problem will be graded**. The participant who correctly answers the most problems wins the tiebreaker, with ties broken by the time of the last correct submission.

1. Trapezoid ABCD has AB parallel to CD , with $\angle ADC = 90^\circ$. Given that $AD = 5$, $BC = 13$ and $DC = 18$, compute the area of the trapezoid.
2. The cubic $f(x) = x^3 - 7x - 6$ has three distinct roots, a , b , and c . Compute $\frac{1}{a} + \frac{1}{b} + \frac{1}{c}$.
3. Ben flips a fair coin repeatedly. Given that Ben's first coin flip is heads, compute the probability Ben flips two heads in a row before Ben flips two tails in a row.
